

My success story

Before joining the class I thought AI was something I could never do. I had zero knowledge about it. On the first day I walked into the class with a blank mindset but I believed that I would learn it soon. No matter how difficult it seemed, I never wanted to give up.

The class was beginner friendly and easy to follow. The environment was informative and our teachers were supportive. During the one month course, we performed different tasks and learned many new skills such as writing prompts, posters, logos and business cards.

We explored different AI tools including open AI's such as ChatGPT, Google, Gemini and Canva AI. These tools help me create posters logos and many other creative design.

The moment I designed my first poster I felt amazing. Something clicked inside me. I realized that the only thing standing between me and these skills was the decision to Start learning.

I realized that it is not as hard as it looks and this realization gave me the confidence to fulfil my dream by creating logos for my art gallery. When I finally completed my work I felt proud, happy and motivated because My hard work had finally paid off. This one month journey taught me that hard work and self belief are the keys to achieving success.

So if you are thinking about learning AI...just join the class, don't wait.

You do not need to know anything beforehand that's exactly what the class is

for 😊
