

Solve a real life problem using AI tools

Student Name Naseema

Class AI class

Submission date 20th April

Topic select designing my dream dress

1. **The Problem:**

The problem I chose is to create **My Dream Dress**. A dress that I always wanted to have. I chose this problem because buying this dress would cost me an arm and a leg, so I decided to design it Myself. This way I could use creativity and imagination to bring my dream dress to life 😊🌟

2. **AI Tools Used:**

I used **Gemini** for generating creative ideas about possible assignment topics.

I used **Meta AI**. Mainly for designing matching bag.

I used **ChatGPT** to generate an image of my dream traditional Pakistani Anarkali dress.

3. **The Prompts and Outputs:**

AI tools	Prompts	Outputs
<u>Gemini</u>	Suggest me some ideas for my assignment about a practical and real-life problem solving. I want it to be girlish like about shoes, clothes, jewelry, maybe my dream dress.	The "Dream Dress" Sustainability Audit The Problem: Most "dream dresses" rely on fast-fashion methods that are ethically questionable and environmentally damaging. The Practical Solution: Perform a lifecycle analysis on your ideal gown. Identify the environmental cost of its materials (like polyester or non-organic silk) and propose a "sustainable makeover" by sourcing biodegradable fabrics or eco-friendly dyes that maintain the same luxury aesthetic.

<u>ChatGPT</u>	Act as a fashion designer and generate a traditional Pakistani Anarkali dress like often worn at Eid. The dress features simple pearl work around the neckline with a boat neck design. It has floral pearl patterns on the sleeves, a fitted bodice until the waist, and flowing panels decorated with pearl designs. The fabric color transitions from off-white to lavender, made from silk, with a sparkly lavender dupatta.	
<u>Meta AI</u>	Act as a fashion designer design and generate matching bag for my dress it consist a small cute sparkly lavender color bag	

4. **What I Learned:**

I learned that no AI tool is useless if you know how to use it properly. With a specific prompt and more detailed instructions, you can get amazing and accurate outputs. I also learned that different AI tools work differently from each other, so using multiple tools together can give better and more creative results.

5. **One Limitation of AI:**

One limitation of AI tools is that many of them have usage or upload limits, which means users cannot always use them freely according to their needs. Some tools also require strong

internet access or paid subscriptions to unlock full features. Because of these limits, it may sometimes take more time or effort to complete tasks when the required features are restricted.

Critical thinking questions

1) Was the AI always correct? Give an example of something it got right and something it got wrong.

A. No, the AI was not always correct. For example, the AI correctly created a design of an Anarkali dress with pearl work and color transition that matched my description. However, the first image it generated was not exactly how I wanted it to look, so it got some details wrong and I had to edit and improve it to match my idea.

2) Did you need to edit or improve any of the AI output? What changes did you make and why?

A. Yes, I needed to edit and improve the AI output. I made changes to the prompts by adding more details about the neckline, sleeves, colours, and fabric so the design would look more accurate. I also corrected spelling mistakes and rephrased some sentences to make the description clearer. These changes were necessary to get better and more realistic results.

3) Do you think AI could fully replace a human doing this task? Explain your answer.

A. Definitely no, AI cannot fully replace a human in doing this task. AI can generate ideas and designs, but it still depends on human creativity, imagination, and decision-making. A human understands personal style, preferences, and emotions better, so AI works best as a helpful tool rather than a complete replacement for humans.

Bonus Challenge:

Giving the same prompt to two different AI tools and comparing their outputs:

Prompt	Gemini	ChatGPT
Act as a fashion designer and generate a traditional Pakistani Anarkali dress like often worn at Eid. The dress features simple pearl work around the neckline with a boat neck design. It has floral pearl patterns on the sleeves, a fitted bodice until the waist, and flowing panels decorated with pearl designs. The fabric color transitions from off-white to lavender, made from silk, with a sparkly lavender dupatta.
